

Angular handstand from the pike - Forearm push-up position - Group: Handstand

Tags

Type of exercise: Partial body exercise, Strength exercise

Number of persons: One

Muscle Primary: Abdominis, Arm, Leg

Muscle Secondary: Shoulder, Back

Difficulty: Hard

Other: 1 Sling, Knee height, Dynamic

Description

1. From the forearm support position, the hip is moved over the vertical shoulder axis. Then the legs are splayed outwards and led upwards until the handstand is reached. 2. The legs are lowered in a controlled manner and then the hips are moved back so that the push-up position is reached again.

Advice

Avoid a "hollow cross" during the execution! Pay attention to the individual distance of the hands in the starting position to the suspension point.
