

A-Flies - Group: Flies

Tags

Type of exercise: Partial body exercise

Number of persons: One

Muscle Primary: Back, Shoulder

Muscle Secondary: Arm, Abdominis

Difficulty: Difficulty level 1

Other: Hip height, 1 Sling

Description

1. The upper body is erected at (almost) stretched elbow joints and simultaneous movement of the arms down. 2. The upper body is brought by return of the arms in the starting position.

Advice

In the final position, try to bring the scapulae as close together as possible to optimally load the upper back muscles. If you put the feet off, the exercise is much easier.
